Dear Robert

**BLYTH WOOD PARK, 20 BLYTH ROAD, BROMLEY BR1 3TN**

Further to our recent correspondence, the following paragraphs summarise work undertaken by Transport Planning and Infrastructure (TPI) Ltd. to support the principle of a new access junction to serve 20 Blyth Road in Bromley, accessed via Bracken Hill Lane.

A radar speed survey was undertaken between Friday 24th March and Thursday 30th March 2017 to record vehicle speeds passing the proposed access location on Bracken Hill Lane. The speed data is attached to this letter, and demonstrates that a negligible number of vehicles pass the site on any given day.

The data also demonstrates how vehicle speeds are very low. No vehicles were recorded as travelling above 20mph; indeed, the highest speed recorded was 16mph in both directions.

Relevant design guidance in respect of the measurement of visibility at a junction is contained within Manual for Streets 2 (MfS), adopted September 2010. The formula contained within MfS would require visibility splays of 15.6 metres based on observed vehicle speeds, which is significantly below the 43-metre requirement for a 30mph road.

The architects drawing attached to this letter illustrates 2.0 x 15.6 metres visibility splays in both directions from the access junction. The visibility splay is shown one metre into the carriageway in both directions, which MfS allows for when accounting for the tire track of an approaching vehicle.

The above is achievable with some removal of the existing wall bordering the site, although this will not impact on any existing trees. The existing wall will be retained at a sufficient height so as not to impact on the view of drivers when leaving the site.

Based on the above, sufficient visibility splays based on observed vehicle speeds can be achieved in both directions from the proposed site access location.

Yours sincerely

**David McMurtry**  
**Associate Director**
